TITLE OF INVENTION: Rice Nucleic Acid Molecules and Other Molecules Associated With
TITLE OF INVENTION: Plants and Uses Thereof for Plant Improvement
PILE REFERENCE: 38-21 (53221) B
CURRENT APPLICATION NUMBER: US/10/437,963
CURRENT FILING DATE: 2003-05-14
NUMBER OF SEQ ID NOS: 204966
SEQ ID NO 108901
LENGTH: 65

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   T10532

gag-pol polyprotein precursor - feline leukemia virus (strain FeLV-FAIDS)
N,Contains: core protein pl0; core protein pl2; core protein pl5; core protein p27; endc
C,Species: feline leukemia virus
C;Species: feline leukemia virus
C;Accession: T10532
R;Donahue, P. R.; Hoover, E. A.; Beltz, G. A.; Riedel, N.; Hirsch, V.M.; Overbaugh, J.; Mul
A;Title: Strong sequence conservation among horizontally transmissible, minimally pathog

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RESULT 7

GTP-binding protein G25K - human (fragments)

N.Alternate names: guanine nucleotide dissociation inhibitor protein
G.Species: Homo sapiens (man)
G.Date: 19-May-1994 #sequence_revision 19-May-1994 #text_change 18-Aug-2000
G.Accession: PNO674
F. P. S.

Ornithine cyclodeaminase (EC 4.3.1.12) [validated] - Agrobacterium sp. plasmid pric58 (5) Species: Agrobacterium sp. C. Pate: 31-Dec-1990 #text_change 17-Mar-2000 C. Pate: 31-Dec-1990 #text_change 17-Mar-2000 C. Pacession: S00402 E. Stroeder, J. Bur. J. Bloochen. 173, 123-130, 1988 A. Pittle: Ornithine cyclodeaminase from Ti plasmid C58. DNA sequence, enzyme properties are A. Reference number: S00402; MUID:88185308; PMID:3281832 A. Accession: S00402; MUID:88185308; PMID:3281832 A. Accession: S00402; MUID:88185308; PMID:3281832 A. Accession: S00402; MUID:88185308; PMID:3281832 A. Accession: S00402; MUID:88185308; PMID:GA30316.1; PID:g39108 A. Accession: Diasmid pric58 A. Accession: Diasmid pric58 C. Genetics: A. Accession: Diasmid pric58 C. Function: EC 4.3.1.12 [validated, MUID:88185308]; ornithine cyclodeaminase; catalyze A. Note: cofactor NAD+ C. Superfamily: ornithine cyclodeaminase
C; Superfamily: ornithine cyclodeaminase
C; Keywords: ammonia-lyase; carbon-nitrogen lyase; opine catabolism
                                                                                                                                                                                                                              hypothetical protein T30A10.70 - Arabidopsis thaliana
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Date: 15-Oct-1999 #sequence_revision 15-Oct-1999 #text_change 15-Oct-1999
C;Accession: T77130

B53764

Bcta2-chimerin, cerebellar - rat (fragment)

NyAlternate names: GTPase-activating protein

C;Species: Rattus norvegicus (Norway rat)

C;Species: Rattus norvegicus (Norway rat)

C;Accession: B53764
